LITERACYPLUS

ABOUT US

Reading Essentials & Head Start to Primary One - Preschools

Integrated Approach

While most preschools focus solely on phonics, teaching words in isolation, LiteracyPlus takes an integrated approach to building reading fluency. We combine phonics with sight word recognition, and teach words in the context of sentences, paragraphs, verse and storybooks.

Award-winning Picture Books

Our programmes feature award-winning storybooks accompanied by a variety of fun and engaging activities to foster a love for books and reading. Through reading aloud, shared reading and independent reading, pupils are given ample practice to improve reading confidence.

Preparation for Primary School

To ease the transition to Primary 1, we develop Oral Communication skills through speech and drama activities such as choral reading, poetry recitation and readers' theatre. In Kindergarten 2, pupils are taken through basic Comprehension exercises and simple Writing tasks.

Enhancing English Language Skills (EELS) - Primary & Secondary

Personalised Learning

Small class sizes (up to 10 students) give students more individual attention. Based on a diagnostic test, we recommend classes that are most suitable for each child's current learning ability. We also organise Parent-Teacher Meetings to provide feedback on students' progress.

Comprehensive Exam Prep

Our lessons develop mastery of Reading and Writing skills, supported by a solid grounding in Grammar. Regular practice exercises and mock tests follow the latest MOE syllabus and thoroughly equip students to tackle all components of the school English exam.

Engaging Lessons

Through the use of fun activities and engaging multimedia, we bring English to life and promote discussion. Excerpts of quality children's literature model good writing and encourage reading. Ultimately, our goal is to motivate learning and foster in students a love for English.

Strategies to Excel in Mathematics (STEM) - Primary 3 to Primary 6

Focus on Word Problems

Lessons focus on increasing students' proficiency and confidence in tackling word problems, which make up 50% of the total marks in the PSLE Maths paper. This includes exposure to a variety of word problems, ranging from basic questions to higher-order, non-routine sums.

Conceptual Approach

Our curriculum is structured around problem-solving concepts that have been selected through the analysis of past-year PSLE and school exam papers. Students learn to identify problem type and use efficient methods and time-saving shortcuts to solve each problem.

Training Speed and Accuracy

Warm-up questions and speed exercises to help students sharpen essential computational skills. At the same time, they increase speed and accuracy in the completion of Multiple-Choice and Short-Answer questions, found in both Paper 1 and Paper 2.
